ONLINE APPROVAL

A Centralized Online Approval Registry

Smart Property Management

Since 1995, Archidata offers a web solution for real estate managers. The plans archived on the Archidata platform are leveraged by extracting the information needed for space management and making it accessible rapidly and securely.

Reliable information when you need it

The Archidata Solution integrates with existing management systems. It is a global solution that follows the life cycle of a building. Our platform offers a set of tools for three sectors of activities: assets, operations and projects. Many tools are offered to provide reliable information for all real estate activities.

archidata.com

The Archidata Solution's Online Approval Tool manages the plan and document approval process during all stages of a project. Managers create the projects and the files to be approved, submitters upload the files allowing approvers can then annotate, approve or reject the files.

Each action in the process is recorded by project and each folder owns an activity log.

The approval tool provides project managers with a dashboard of all projects subject by specialty approval and provides an overview of approvals.

The tool also alerts professionals and subcontractors of the timelines for approving drawings as well as new uploaded drawings ready to be submitted, approved, annotated or rejected.

BENEFITS

- Centralized registry of approvals
- Powerful visualization: overview of approval status
- Participant management: easy management of project members access
- Improved workflow of construction project
- Increased accountability of stakeholders
- Approvers can be linked according to workflow
